SUMMARY

Hi, my name is Ridwan, i was born on may 5, 1995. I'm a creative full stack developer for web apps , mobile apps desktop apps and also games, originally from Pekalongan and based in Yogyakarta with over 9+ years of experience in the industry.

I am a passionate creative that leads by example with a hands-on approach. I seek to inspire, and build the best work possible. I am a critical thinker and problem solver that takes a holistic approach to every project, making sure every aspect of it gets produced at the highest quality. I believe that every single line code i've ever created will make the more and more better future.

I am a professional developer with experience collaborating on large-scale projects across global teams and diverse cultures. I am fully versed in Agile and Scrum methodologies, with a strong background in sprint-based workflows.

LANGUAGE

- Bahasa Indonesia - Native speaker.
- English - influence/Conversational.
- Javanese - Native speaker.

EXPERIENCE

Personal Projects

All of these applications were developed before the AI era, so they were built entirely based on my skills and experience, without the use of AI suggestions, AI agents, or code-generation tools.

1. Ulamulem

- **URL:** <https://ulamulem.com/>
- **Description:** An online invitation platform featuring an auto-generated UI clone system. Developed using Loombu Engine, a custom-built engine that clones UI designs with full functionality and converts them into React applications.
- **Tech stack:** React + Go (part of loombu)

2. Stickiform (In Development)

- **URL:** <https://stickiform.com/>
- **Description:** An interactive online form builder alternative to Google Forms and Typeform, packed with advanced features. Currently in development, utilizing the core Loombu Engine for enhanced security (Engine core host: <https://loombu.com/>).
- **Tech stack:** React + Go (part of loombu)

Client & Commercial Projects

All of these applications were developed before the AI era, so they were built entirely based on my skills and experience, without the use of AI suggestions, AI agents, or code-generation tools.

Agentpoint (Acquired by Reapit UK) (Fulltime Under softwareseni)

1. Proposalpoint+

- **URL:** <https://www.proposalpoint.com.au>
- **Description:** A property page builder and PDF generation engine built from scratch. Features an integrated Web and PDF editor powered by a custom CMS engine, enabling dynamic digital proposal creation and layout editing.
- **Tech stack:** React PWA + laravel
- **What i do :** I designed the overall architecture, database structure, and application workflow. I also designed and built the core engine responsible for generating web pages

and PDF documents from web-based templates. This included developing a drag-and-drop editor and a custom web-to-PDF conversion engine from scratch using a node-tree-based architecture. In addition, I continuously improved the platform's features, scalability, and performance.

I created the initial prototype in just one week, long before AI-powered development tools became widely available, relying entirely on engineering expertise, problem-solving skills, and hands-on experience.

After the MVP done, then i lead 2 team member, 1 backend and 1 frontend to help me develop the new feature

2. MAP leadplus

- **URL:** (Product retired post-acquisition)
- **Description:** A drag-and-drop property page builder and editor engine built from scratch using React and custom algorithms. Allowed real estate agencies in Australia to build dynamic web layouts effortlessly.
- **Tech stack:** React PWA + laravel
- **What i do :** I designed the overall system architecture, database structure, and data flow. I also designed and built a node-tree-based engine from scratch for generating web pages, including a custom drag-and-drop builder. In addition, I continuously enhanced the platform by introducing new features, optimizing performance, and improving scalability and maintainability.

3. Account Plus

- **URL:** <https://accounts.leadplus.com.au>
- **Description:** A centralized Single Sign-On (SSO) authentication and account management system for all Agentpoint products.
- **Tech stack:** React PWA + laravel
- **What i do :** I designed and implemented the Single Sign-On (SSO) architecture, including the authentication and authorization flows. I defined how user access and permissions are managed across the platform and designed the communication protocols between services to ensure secure and seamless authentication, authorization, and identity management throughout the ecosystem.

4. Content Plus

- **URL:** <https://content.leadplus.com.au/>
- **Description:** A dynamic content management system (CMS) for forms and pages, built on an architecture similar to the MAP engine.
- **Tech stack:** React PWA + laravel
- **What i do :** mostly similar with MAP but i only design the engine the CMS using react

5. Event Collector leadplus

- **URL:** (Internal Library)
- **Description:** A custom Google Analytics-like event tracking library built from scratch to capture user interactions across MAP and Proposalpoint+ applications.
- **Tech stack:** laravel + typescript
- **What i do :** i design everything from the database, and how the event transport and how to make it easy when implementing with all agentpoint service

Reapit UK / Console (Acquired by Reapit UK) (Fulltime Under softwareseni)

1. Reapit Form

- **URL:** <https://app.forms.reapit.com.au>
- **Description:** A specialized online form builder for real estate agencies focused on tenant contract agreements, engineered using a custom drag-and-drop web builder system.
- **Tech stack:** React + Dotnet c#
- **What i do :** I designed the application architecture (based on MAP architecture and adapted to project requirements), defined the database flow, and shaped the overall user experience. I also proposed and helped implement a monorepo approach to improve code sharing, consistency, and maintainability across the project.
- I lead 2 people here, 1 backend and 1 frontend, because after i finish the MVP, the feature os more coming

2. Reapit Elements

- **GitHub:** <https://github.com/reapit/elements>
- **NPM:** <https://www.npmjs.com/package/@reapit/elements>
- **Description:** Contributed to the development of Reapit's open-source React UI component library, published on GitHub and NPM for internal and public integration.
- **Tech stack:** React

- **What i do :** In this project, I focused on developing and maintaining reusable components used across the Reapit ecosystem. I worked closely with teams to understand their requirements, designed component workflows, and built scalable, reusable, and developer-friendly solutions. My goal was to create consistent, maintainable components that could be easily adopted across multiple applications.
- 3. **Console PM**
 - **URL:** <https://pm.reapit.com.au/>
 - **Description:** A microservice-based property management platform originally built for Console Australia, now rebranded as Reapit PM post-acquisition.
 - **Tech stack:** Angular + React + Dotnet c#
 - **What i do :** In this project, my primary responsibility was migrating an existing Angular application to React. To do this effectively, I first gained a deep understanding of the business domain, application workflows, and how data was transported through the Backend-for-Frontend (BFF) layer. I then reimplemented the application in React while maintaining feature parity and improving code maintainability where possible.
- 4. **Console Pay**
 - **URL:** <https://www.reapit.com.au/post/simplified-rental-payments-with-console-pay>
 - **Description:** A standalone rental payment processing module integrated within the Console PM / Reapit PM property management ecosystem.
 - **Tech stack:** Angular + React + Dotnet c#
 - **What i do :** in this project i only converting the existence Angular code to React, so in here i should learning how the business work, how the data transported in BFF and implement the app to react
- 5. **Reapit CRM**
 - **URL:** (Internal / Proprietary)
 - **Description:** Modernized a legacy Laravel CRM application by incrementally refactoring UI components from HTML Blade to React via controlled iframe migration.
 - **Tech stack:** Angular + React + Dotnet c#
 - **What i do :** In this project, my primary responsibility was migrating an existing Angular application to React. To ensure a successful migration, I first learned the business processes, application workflows, and how data was transported through the Backend-for-Frontend (BFF) layer. I then rebuilt the application in React while preserving the existing functionality and user experience.

Singapore Institute of Technology (Freelance via Alpine Dynamics Pte Ltd)

1. **SIT Crowd Monitoring**
 - **URL:** (Internal System)
 - **Description:** An IoT-integrated campus monitoring platform tracking CCTV feeds and crowd density across the Singapore Institute of Technology.
 - **Tech stack:** Angular + Dotnet c#
 - **What i do :** In this project, I developed the application from scratch using Angular and collaborated closely with the backend team to define API contracts, data structures, and communication flows between frontend and backend services, ensuring a scalable and maintainable architecture.
2. **SIT Utilities Consumption**
 - **URL:** (Internal System)
 - **Description:** An IoT-connected dashboard tracking campus resource consumption including water, air conditioning, and cooling units.
 - **Tech stack:** Angular + Dotnet c#
 - **What i do :** Similar to other projects in this company
3. **SIT Tenant Utility Consumption**
 - **URL:** (Internal System)
 - **Description:** A specialized utility monitoring platform tracking resource usage specifically for commercial tenants on campus.
 - **Tech stack:** Angular + Dotnet c#
 - **What i do :** Similar to other projects in this company
4. **SIT Power Budget Monitoring**
 - **URL:** (Internal System)
 - **Description:** A resource monitoring application tracking financial expenditure and energy consumption budgets across campus facilities.
 - **Tech stack:** Angular + Dotnet c#
 - **What i do :** Similar to other projects in this company
5. **SIT Green Mark Monitoring**
 - **URL:** (Internal System)
 - **Description:** Environmental compliance software focused on tracking electricity budget

- thresholds for Green Mark certification.
- **Tech stack:** Angular + Dotnet c#
- **What i do :** Similar to other projects in this company
- 6. **SIT Contracted Capacity Monitoring**
 - **URL:** (Internal System)
 - **Description:** An analytical tool monitoring utility usage thresholds against pre-set limits to avoid contract overage penalties.
 - **Tech stack:** Angular + Dotnet c#
 - **What i do :** Similar to other projects in this company
- 7. **SIT Cleanliness**
 - **URL:** (Internal System)
 - **Description:** An IoT-based environmental quality application monitoring indoor air quality, ammonia levels, and room cleanliness across campus.
 - **Tech stack:** Angular + Dotnet c#
 - **What i do :** Similar to other projects in this company
- 8. **SIT Living Lab**
 - **URL:** (Internal System)
 - **Description:** A centralized analytics platform that consolidates data and generates reports across all SIT IoT applications.
 - **Tech stack:** Angular + Dotnet c#
 - **What i do :** Similar to other projects in this company

Azbil & Nanyang Technological University (Freelance via Azbil Singapore Pte Ltd)

1. **Utility Management System (UMS)**
 - **URL:** (Internal System)
 - **Description:** Internal desktop and mobile tools (UMS Chiller) built with Ionic and Angular to monitor and manage energy and chiller consumption for Nanyang Technological University.
 - **Tech stack:** Angular + Dotnet c#
 - **What i do :** In this project, I developed the application from scratch using Angular and collaborated closely with the backend team to define API contracts, data structures, and communication flows between frontend and backend services, ensuring a scalable and maintainable architecture.

Freelance Direct Clients

1. **PT. Antasena Maritim Jaya - Underwater Services**
 - **URL:** <https://underwaterservices-amj.com>
 - **Description:** A corporate website and landing page for an underwater services company based in Balikpapan, East Kalimantan, built using WordPress.
 - **Tech stack:** wordpress
 - **What i do :** Implemented provided designs and mockups in WordPress, ensuring all functionality and user requirements were delivered accurately and consistently.
2. **PT. Arya Pujaka Indonesia**
 - **URL:** <https://aryapujaka.com/>
 - **Description:** A portfolio website for a commercial diving and underwater services company in Indonesia, developed using WordPress.
 - **Tech stack:** wordpress
 - **What i do :** Implemented provided designs and mockups in WordPress, ensuring all functionality and user requirements were delivered accurately and consistently.
3. **ACC (Astra Credit Companies)**
 - **URL:** <https://www.acc.co.id/>
 - **Mobile App:** <https://andro.io/app/accone>
 - **Description:** Mobile and web applications developed for Astra Credit Companies utilizing hybrid Ionic technology.
 - **Tech stack:** React + next(ssr routing) + laravel + ionic for mobile
 - **What i do :** Developed the application and collaborated with the backend team to improve application security, including identifying and addressing access control vulnerabilities such as IDOR (Insecure Direct Object Reference). I also built and maintained automation pipelines for generating and deploying Ionic mobile applications, improving development efficiency and release consistency.
Idk why they hire backend that had less knowledge about security, im as front here, but also helping the backend team to create the security and create the autodeploy
4. **Memoriasma (Client: Novartis & PDPI)**
 - **URL:** <https://apkpure.com/id/memori-asma/com.memoriasma>

- **Description:** An educational and asthma-control monitoring mobile application developed in React Native to facilitate communication between doctors and patients.
 - **Tech stack:** laravel + blade + react-native for mobile
 - **What i do :** i create the app, create the database and the dashboard and the data flow, and create automation to deploy the app to apk
5. **ARTA Archive (Client: ARTA Tax Consultant)**
- **URL:** (Internal System)
 - **Description:** An internal digital file management system designed for tax auditors and consultants, featuring Git-like versioning and audit trail history.
 - **Tech stack:** React + laravel
 - **What i do :** As a Frontend Developer on this project, I collaborated with the backend team to design the file storage strategy and define APIs for handling large file uploads and downloads. I contributed to the design of streaming-based file transfer workflows to ensure efficient, reliable, and scalable handling of large files while maintaining a smooth user experience.
6. **Pasarimo**
- **URL:** <https://play.google.com/store/apps/details?id=eu.fivea.pasarimo>
 - **Description:** An Indonesian e-commerce mobile app featuring digital product transactions (mobile credit, PPOB bill payments) with a top-up and refundable wallet system.
 - **Tech stack:** React + laravel + ionic for mobile
 - **What i do :** i create the app, create the database and the dashboard and the data flow, and create automation to deploy the app to apk
7. **BEKUP by Kemenparekraf**
- **URL:** <https://www.bekup-ekraf.id/>
 - **Description:** Official landing page for BEKUP (Ekraf for Startups), an intensive incubation program organized by the Indonesian Ministry of Tourism and Creative Economy.
 - **Tech stack:** React + next
 - **What i do :** i create the app and architecture, no database work here
8. **Campedia**
- **URL:** <https://campedia.com.au>
 - **Description:** A cross-platform web and mobile application for renting caravans, campsites, and outdoor holiday locations across Australia.
 - **Tech stack:** Angular + nodejs express + react-native for mobile
 - **What i do :** i create the app on mobile, create improvement, design the local db to store all map data, and create local query to handle collect data by distance, this is the most crazy app, the client want the app run smoothly like google map, but the backend can;t handle it, so i decide to resync in the background, design the local db, so the map will feels like google map with point interest

Software Agency Work

1. **Lead Software Developer in Softwareseni**
- **Year:** Jun 2018 - Present · 8 yrs 2 mos
 - **URL:** <https://www.linkedin.com/in/ridwanfoxdream/details/projects/>
 - **Position:** Senior Full Stack Developer as Lead
 - **Description:** Developed numerous commercial applications during my tenure at Softwareseni, spanning e-commerce platforms, property management systems, landing pages, and cross-platform mobile apps.
 - **Tech stack:** mostly react + laravel + angular + next and the latest is payload cms
 - **Curently :** for currently i work in two project, pepy the time tracker for business and Autonomist chat like hubspot, but the autonomist is develop using AI agent, so no something special here

EDUCATION

Universitas Teknologi Yogyakarta (2018)

BACHELOR DEGREE OF COMPUTER SCIENCE - GPA 3.36

CERTIFIED

Certified Programing from BNSP (2018)

I've been certified by BNSP (Indonesian Professional Certification Authority) for Competence of
